

Lam Family Law - Artificial Intelligence Use Statement

As artificial intelligence (“AI”) technology continues to evolve and become more widely used, Lam Family Law has developed this AI Use Statement to outline how we use these tools with a focus on ensuring our professional obligations to our clients are always met.

Our Approach

Lam Family Law recognizes that AI tools can be used to enhance a growing number of tasks, such as research, drafting, and administrative items. Any use of AI must be consistent with our professional obligations, including duties of confidentiality, competence, quality, and accuracy.

Our Commitment – Confidentiality and Privacy

Our team members do not input confidential or identifying information into publicly available AI platforms. When AI tools are used to assist in creating our final work product, the responsible lawyer or administrative staff independently reviews and verifies all legal authorities, factual information, and any other citations to ensure accuracy, completeness, and reliability.

AI-assisted notetaking or transcription: We always seek consent from all participants prior to using AI-assisted notetaking or transcription for calls/meetings. The notes/transcript may not be fully accurate, and we do not routinely review/edit the notes for accuracy. This is not typically cost-efficient; however, review/edits may be provided upon request.

The Human Element

We recognize that AI tools may support, but do not replace, our human judgment. Our firm has historically focused on niche research and drafting services, and these will remain part of our core services (along with advisory services, appeal work, etc.). We are committed to using AI to supplement our work, while maintaining competence and quality.

Please feel free to contact our intake email (hello@lamfamilylaw.ca) or any of the lawyers at Lam Family Law to discuss anything further.
